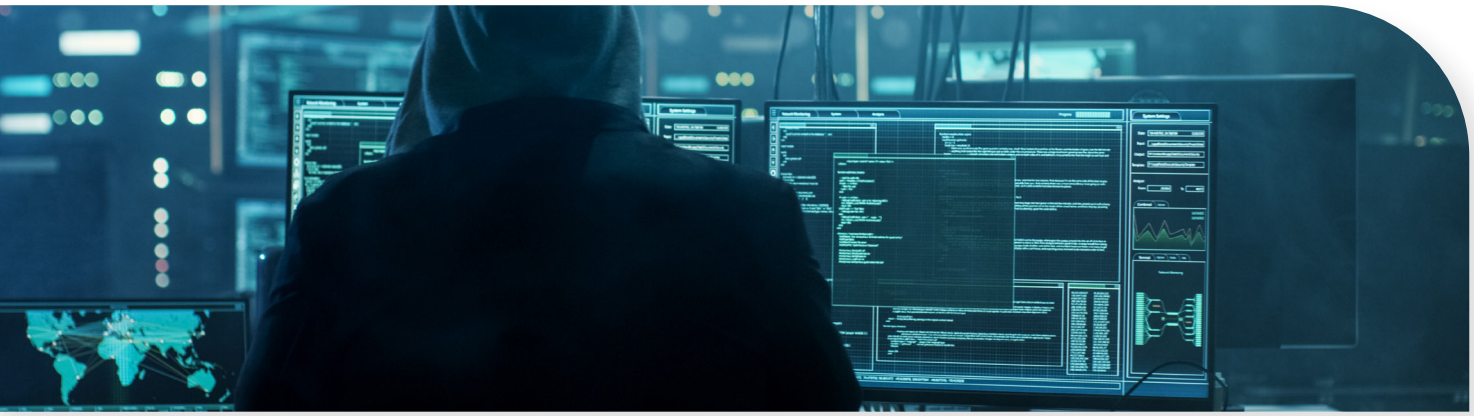
Tailor Made TECHNOLOGIES IT & Communications

CyberACTIVE

CyberACTIVE is a full defence, in depth, cyber solution for SME businesses which utilises the latest industry-leading security solutions to deliver comprehensive protection against cybercrime.



What is CyberACTIVE?

Our fully managed service delivers visibility and remediation across your IT estate for a variety of cyber security threats and vulnerabilities.

By utilising the service, your organisation has the advantage to react to emerging threats efficiently and effectively, helping to keep your IT estate protected from cyber criminals.

Proactive services include patch management, email and web monitoring, vulnerability assessments and, phishing services which help to keep your business protected from many forms of cyber-attacks.

What does it do?

1. Protects all laptop and desktop devices against viruses including many next generation viruses.
2. Ensures network and infrastructure devices are secure with the latest security patches.
3. Protects the corporate network from many malicious emails with automated learning.
4. Prevents users from being able to access harmful material online through the adoption of an appropriate web filtering policy.
5. Delivers monthly campaigns to test your employees against phishing attacks and educates them if they potentially expose your organisation to cybercrime.
6. Provides your business with Next-Generation Antivirus & EDR (Endpoint Detection and Response) enabling the detection and isolation of many suspicious endpoint activities.
7. Provides internal network probes that alert if a device becomes suspicious, or unusual activity is detected.
8. Scans the external network based on IP addresses to determine any known vulnerabilities.
9. Scans the Dark Web for compromised corporate assets, such as passwords and personal user details.

INCLUDED IN THE PACKAGE

Patch Management - Our advanced patching fixes security vulnerabilities with Microsoft technologies including Windows, Exchange and SQL Servers.

Email protection - Intelligent email protection protects against known, and unknown, security threats in real time, including many commonly known phishing attacks, impersonation and spear-phishing attempts.

Web protection - Advanced Web Protection is installed on every desktop or laptop device owned by your organisation and prevents users from visiting known suspected websites and following links sent to them in phishing attacks.

Phishing & Cyber Awareness training - TMT cyber experts trigger nonharmful real-world phishing campaigns against your employees every month to expose areas for training and improvement. We also deliver training on modules such as good password hygiene, Password Managers, Data Privacy and Data Protection, and use of public Wi-Fi and Social Media.

Next-Gen Antivirus and EDR - Our Next-Generation Antivirus and EDR uses behavioural data to determine if a user device on your network is a threat and then takes action to block and contain it from causing harm.

Internal Cyber scan - Our Next-Generation Antivirus and EDR uses behavioural data to determine if a user device on your network is a threat and then takes action to block and contain it from causing harm.

External vulnerability scan - External risk assessment on all internet facing assets to identify if any external system has missing patches, thus exposing vulnerabilities.

Dark Web scanning - Dark Web scanning monitors the criminal underworld and retrieves information about the business, and its users, who have compromised credentials or personal information.

Access to the TMT SOC - TMT's cyber experts who deliver the service are available to your organisation to handle any incidents that arise.
