

Engineering Services

With over 100 engineers and consultants, TMT has one of the most skilled and advanced IT engineering teams in Southern England dedicated to the SME community.

All members of our team are both friendly but also fully competent, trained, and certified in their allocated technology.

ENGINEERING SERVICES

As TMT is one of the UK's largest MSPs for the SME community, the scale of our engineering operations enables us to have focused technology experts, that smaller service organisations may not have the scale to achieve.

The benefit to the customer is that we have a greater level of expertise and can very often rapidly achieve what others would struggle to over a longer period. It also allows us to ensure that all technologies deployed in a project are fully optimised and configured for maximum effect.

Our engineering services may be deployed for a wide variety of tasks including project implementations, problem resolutions, IT and data migrations, technology reconfiguration or optimisation, and cybersecurity set up, policies, or breaches.

Services can be procured in a "block" of days for easy use, or for a specific number of days to complete defined tasks.

OUR ACCREDITATIONS

Comprehensive skills - Our large team of technology consultants and engineers contains experts in almost every relevant IT technology used by the SME community.

Certified & accredited - As part of the ongoing TMT commitment to employee training and development, all engineers are certified by the relevant vendors and certified by industry bodies as required. This helps to ensure our expertise is always up to date and relevant. Key certifications exist for all major technology vendors including Microsoft, Cisco, VMWare, Citrix, and HP. All TMT professional services are delivered in accordance with both ISO9001 and 27001 quality standards.

Friendly & approachable - All TMT engineering professionals are selected not just based on their technical expertise but also their ability to communicate and help explain, in a friendly manner, to customers what can be quite complex IT matters.
