

Network Solutions

Tailor Made offers a secure, private IP network that enables fast and reliable communications between multiple offices.

Our connectivity infrastructure will optimise your business now and set you on a path to ensure your future requirements are also met.

MPLS

Our MPLS are fully managed services that offer a private, dedicated, and resilient network connection for UK businesses.

Customers benefit from a fast, efficient, and reliable transfer of data, voice, and business-critical applications across a multi-site environment.

As the data circuits connecting to a central cloud rather than an individual site level, the network is more flexible and resilient than using site-to-site lease lines or VPNs which require expensive routers and configuration.

SD-WAN

Whether you have a public or private cloud network, our managed SD-WAN solutions put you in control of your business' connectivity.

If your business network requires heightened flexibility and scalability but you still need to move data quickly and efficiently between sites, then a software-defined WAN (SD-WAN) is a flexible alternative to our traditional solutions.

As data and telephony applications continue to push to the cloud and with the growth of a more agile workforce, SD-WAN enables the instant scaling up or down of bandwidth provision with ease.

BENEFITS

- **Futureproof architecture** - Your network can respond rapidly to changing business needs.
- **Unbeatable network visibility and control** - You will have a single enterprise-wide view of your sites.
- **Deliver firewalled internet access** - From the cloud to specified facilities to eliminate internal local loop costs.
- **Simplify administration** - Tailor Made will manage your network so you don't have to.
- **UK-based business support** - We monitor our entire network 24/7 and we work closely with our carrier partners to detect and resolve faults to ensure you get the most stable connection possible.
