

Data Backup & Disaster Recovery

TMT provides a range of storage and data backup and DR solutions that are both secure and tailored to the specific needs of your business. Each TMT backup and DR solution makes use of robust, proven, and tested technology which typically involves storing and backing up data into a secure public or private cloud platform.

DATA BACKUP & DR

Disaster Recovery has also become a fundamental part of a business's day-to-day requirements.

Regular and secure data backup of all business-critical information is important to ensure continuity of service in the event of a significant event, but also necessary for many businesses for compliance reasons where regulations specify that data must be held for multiple years. TMT deploys a range of solutions allowing companies to have almost instant access to all critical data in the event that access to their primary infrastructure has been lost.

Backups can be configured to backup "all" data or just select types of data, usually at a specific time of day, and set

up in such a way that it causes minimal disruption to the day-to-day performance of the IT infrastructure.

Backups can be performed for multiple types of physical devices including laptops, desktops, and servers but also a variety of application data sets including email, data files, and specific databases. Different backup policies can be set up according to the device or data being backed up.

TMT implements a series of robust processes to check that backups have occurred, and that data is backed up in an uncorrupted manner. At pre-agreed intervals, TMT engineers can perform test "restore" operations to ensure that in the event of an incident data can be restored in a rapid and trouble-free fashion.

BENEFITS

Full or Partial Backup & Recovery - Ensure you can recover your valuable data following an incident, accidental loss, or a cyber-attack.

DR & Business Continuity Solutions - All company data remains readily available in a separate location in the event of a disaster.

Flexible Policies - TMT experts will help each customer define and set up appropriate backup policies for different types of data, different types of users, and different applications.

Run "Silent" Functionality - TMT backup solutions make use of innovative and robust backup technologies that run in the background in a "silent" manner to minimise any day-to-day disruption to the performance of the IT network.

Recovering & DR Testing - On a pre-agreed, periodic basis TMT will test different aspects of the individual backup solution to test that "restore" functionality can be achieved and that data is continuing to be backed up in an incorrupt manner.

Predictable and known monthly business costs - All TMT backup & DR solutions are provided based on a fixed monthly cost thus aiding budget provision and cashflow management.
