

Microsoft Teams

The leading communications and collaboration platform from Microsoft, which was the fastest-growing Microsoft application in 2020. Teams was widely adopted during the COVID-19 pandemic as it is ideal for remote working. TMT has successfully implemented Microsoft Teams for many organisations across multiple industries and sectors.

MICROSOFT TEAMS

Microsoft Teams is an application that allows your workforce to communicate, collaborate, call, or chat, all in one place.

With the adoption of homeworking, Teams will allow your employees to retain a constant line of communication to keep projects moving, even when they are not in the office and across multiple devices including desktops, laptops, and mobile devices.

TMT Teams implementations allow organisations to enhance performance and improve collaboration by enabling the use of instant messaging, video calling for online meetings, and sharing and collaborating on documentation in real-time.

TMT offers enhancements to Microsoft Teams by enabling it to be used for external calls and integrated into selected telephony systems including the use of facilities such as call recording and/or call transfers.

Teams can be licenced in a variety of ways in conjunction with other Microsoft solutions, such as Office 365. TMT experts can advise on the most suitable model for your organisation and how to implement it in a safe secure manner.

BENEFITS

Easy to use online video calling - Teams provides simple and effective video conferencing facilities whether this is for 1:1 meetings or group sessions. Screen sharing functionality is also included. Meetings can be easily recorded if required.

Instant chat service - Teams provides an intuitive and simple chat function that can take place between both individuals and groups.

Sharing information - Within Teams, each "channel" can be set up to share documents between group members thus improving collaboration and workflow.

Bundled licencing- Teams is often licenced with Office 365 providing a simple and scalable way to expand collaboration and communication across your business without the need for expensive upgrades.
